

Beer Pork Site Plan - 130411

Black arrows show the direction of storm water drainage. Barns are labeled as shown. The two barns are situated on 8 foot under floor deep pits. Feed bins are located on clean concrete pads located on the northeast corner of the buildings with the feed totally enclosed. Mortalities are placed in a watertight dumpster located along the roadway to the site. The facility contained 14,000 head of swine under 55 pounds and no discharge was noted at the time of inspection.
